

HOW VERIFIED MEDICAL BENEFITS HEALTHCARE

COMMUNICATION

Doctor/Specialist Referrals

Direct communication between doctor and specialists via web and mobile.

Doctor/Patient

Allow patients to securely share photos of wounds throughout the healing process.

Doctor/Nurse Practitioner

Capture images and data from remote locations and discuss with the doctor and other healthcare professionals.

SECURITY

Encrypted Data

Data is encrypted at capture, transmission and rest using bank-grade encryption methods.

Tokenized Linking

Secure tokenized linking for external contacts.

Automatic Logout

Healthcare accounts time out after a period of inactivity, help prevent against data theft.

COLLABORATION

Collaborate with Healthcare Providers

Share images, notes and other useful data with other healthcare providers in real-time.

Collaborate with Specialists

Discuss patient diagnosis with specialists and consultants, prioritize patient appointments.

Collaborate with your Patient

Discuss patient images, diagnosis and results securely, monitor the healing process.

- Direct communication with healthcare professionals and your patient improves the quality of patient care and increases billing opportunities.
- Personal information is protected through high-grade security protocols, protecting you and your patient.
- Securely share images of patient condition with specialists who can prioritize treatment based on real, visual referrals.
- Maintain a visual history of patient condition as an adjunct to your EMR, refer to previous images to view patient healing progress.
- Reduce patient waitlists with direct image referrals and prioritization of severe cases. No more wasted consultation appointments.
